## LAWN FERTILIZING SCHEDULE

**February:** Apply Soil (Lime) to adjust the pH of your soil. Lawns respond to fertilizer better if the pH of the soil is neutral.

**March:** First application of fertilizer. Use either:

- Ferti-lome® Classic Slow Release Lawn Food
- Ferti-lome® Classic Lawn Food with Moss Control (if moss is present)
- Also add Natural Guard® Soil Activator (this adds beneficial organisms to the soil)

**May:** Second application of fertilizer.

- Ferti-lome® Classic Slow Release Lawn Food

**July:** Third application of fertilizer. Use either:

- Ferti-lome® Classic Slow Release Lawn Food
- Ferti-lome® Weed-Out Weed Killer & Lawn Food (if weeds present)

**October:** Last application of fertilizer.

- Ferti-lome® Winterizer Lawn Food (this is the last application, but the most important because it helps develop a stronger root system for your lawn)
