

TREE PLANTING TIPS

- We recommend the use of Root Stimulator to reduce stress & increase planting success.
- Remove any broken, crossing or diseased limbs to protect trees from disease or pest invasion.
- Do not push down the root ball with your feet, you may crush fragile surface roots. Pat the soil with your hands to make contact with the roots.
- Applying Plant Success Tablets at the bottom of the planting hole introduces beneficial mycorrhizae to help your new tree thrive.
- Soil Building Conditioner is a great way to break up the clay soil that is prevalent in the Willamette Valley.
